EXPERIENCE

Freelance Software Engineer

2024 - Present

Case management platform · law firm

- Designed and shipped the platform solo in about 4 months; up to 10 attorneys and staff use it daily with role-based access control, and the firm's spreadsheet workflow is retired.
- Built billing, document automation from versioned templates, and email notifications via AWS SES.
- Added a client portal with attorney messaging and an audit trail of every view, edit and download.

Laravel · Vue · Inertia · MySQL · AWS (EC2, RDS, S3, SES) · [Case study](#)

Multi-campus data hub · state university

- Built a Google Drive-style file and submissions platform with ONLYOFFICE for in-browser document collaboration, now live for faculty across all 4 campuses.
- Wrote Go sidecars for resumable uploads that survive exam-week traffic on flaky campus networks, ClamAV virus scanning with quarantine, and X.509 PDF signing.

Laravel · Go · Vue · MySQL · S3 · ClamAV · ONLYOFFICE · udh.nemsu.edu.ph · [Case study](#)

Software Engineer, Province of Surigao del Sur

2021 - 2024

- Built a records platform for 500+ civil-servant files and a tourism analytics dashboard, replacing paper and Excel.
- Cut reporting response times by ~60% through query optimization.
- Built an offline AI transcriber for the provincial board, so confidential audio never leaves the machine.
- Automated payroll deductions, tax reporting and SMS alerts, and built an Android app and uptime monitor, turning half-day tasks into one click.
- Introduced Git, code review and CI/CD; mentored 3 engineers.

Laravel · Vue · MySQL · SQL Server · Python · Android · epds.surigadelsur.gov.ph · ars.surigadelsur.gov.ph · [Records case study](#) · [Transcriber case study](#)

Intern Developer, NEMSU

Jul - Aug 2018

- Built a faculty evaluation web app where students rate their instructors' teaching; used by 3,000+ students.
 - Added Python sentiment analysis on written feedback, giving administrators data for strategic planning and decision-making.
-

AFTER HOURS

Chriscast

Raycast-style file launcher for Linux. Indexes 200K+ files in ~5s with sub-millisecond search.

Go · GTK3 · fsnotify · open source

Repository Cleaner

Terminal GitHub manager: search, multi-select and bulk-delete repos with vim-style keys.

Go · Bubbletea · GitHub API · open source

SKILLS

Languages	PHP, Go, TypeScript, JavaScript, Python, SQL, Java, C#
------------------	--

Frameworks	Laravel, Vue.js, Inertia.js, Tailwind CSS, Node.js / Express, REST APIs
-------------------	---

Data	MySQL, SQL Server, S3, queues
-------------	-------------------------------

Infra	AWS (EC2, S3, RDS, SES), Docker, Nginx, Cloudflare, ClamAV, Linux, CI/CD, RBAC
--------------	--

Testing	PHPUnit, Pest
----------------	---------------

AI / ML	Whisper, CTranslate2, on-device inference, NLP
----------------	--

EDUCATION

BS Computer Science , Surigao del Sur State University (now NEMSU)

2015 - 2019
